DIY HUMMINGBIRD FEEDER

Materials:

Plastic Bottle (Powerade/Gatorade)
Red shallow square Tupperware container
Thin Rope
Cutting utensil
Hummingbird food
Take the cap from the plastic bottle and use it to trace the center on the top of Tupperware container. Cut a hole in the center of the Tupperware container the size of the opening of the plastic bottle. Check to make sure the plastic bottle fits through the hole and the cap can be screwed back on. Cut four small holes near the corners on the top of the Tupperware container for the hummingbirds to drink out of it. Make sure to leave enough of a ledge for the hummingbirds to sit on. Then cut a hole in the cap of the plastic bottle so the hummingbird food fills the Tupperware container but not so big that it overflows. In the end, the hummingbird food should only come up to the level of the plastic bottle lid and won’t fill the whole Tupperware container (see picture). Put the plastic bottle through the hole in the Tupperware container lid (from the top) and fasten the plastic bottle lid to the Tupperware lid. Get ready to hang it outside by using thin rope to tie two loops around the bottle, one loop for each indentation.
